

1. ml concepts - answered all of the questions

word2vec definition

implementation

skipgram implementation

skipgram internal architecture

continuous bag of words implementation

Define tfidf

What is tf

What is idf

Formulas for tf idf

Problem statement related to tfidf

Why we use logarithms in idf

How vanishing gradient problem will be solved in lstm

Performance Metrics

Precision , Recall with examples

Problem statement in precision, Recall, False Negatives, true Negatives

2. deep learning concepts- answered all of the questions/concepts

BERT Implementation

BERT attention model

Bert next sentence predictor

Bert masked sentence detection

Bert Encoder, Decoder

Rnn architecture

3. python programming - I gave the correct answers for those(**HANDS_ON**)

Data Frame manipulation operations in jupyter notebook

4. CI/CD pipelines - answered basics (i couldnt give more , just learning these)

How production grade CI/CD pipelines work

How you ingest data from different sources

How you implement checks for pulls/pushs

Github triggers

5. sql queries -answered basics (i can give more , just needed brushing on the concepts)(**HANDS_ON**)

This session is on SQL online console

Create a table with few columns

ADD primary key,

Insert values to columns

Select statements on different columns

Where conditions

Functions like startswith some character

Queries related to groupby

Queries related to limit and groupby and startswith

6. docker commands - answered basics (i couldnt give more , just learning these)(**HANDS_ON**)

Write a docker file

Explain all commands in it

Syntax of all commands

Write a docker file with base image as "", copy all the files in folder , install extra libraries , finally want to execute a python file

7. git questions- answered basics (i couldnt give more , just learning these)(**HANDS_ON**)

Explain the steps of git commands from start

Write all the git commands with tags and syntax

Git triggers
